# About Linux CDP Server Configuration

You, as an Administrator, must define the server-wide settings that are important for CDP Server to work.

To configure your Linux CDP Server, you can use:

- Configuration section in the CDP Server
- API commands

You can configure the following:

- Disk Quotas settings
- Task history clean-up policy
- Web Server options (HTTP, SSL)
- CDP Server user password
- CDP Agent options
- Heap memory
- MySQL connector
- License
