

Troubleshooting Policies

If an error occurs during the runtime of a policy, the Policies Error window will be displayed. Follow the instructions below to access the troubleshooting information.

1. Select "Dashboard" from the main menu.

2. You will see the Policies Error window, where all the policies and their statuses are displayed.

For each policy status there is an icon. All possible statuses are listed in the following table.

	Indicates the Policies that are OK.
	Indicates the Policies that have warnings.
	Indicates the Policies that are not OK.

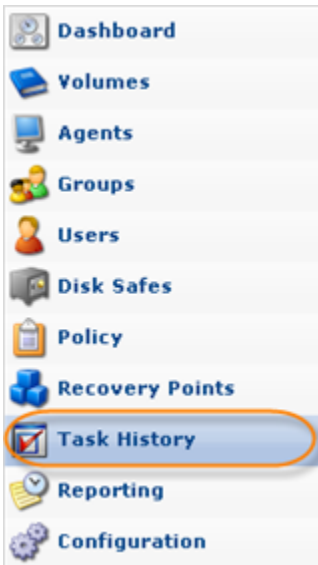

3. To access more detailed information about the policy, click the  icon. This will take you to the "Policy" screen.

 **Note**
When you switch to the "Policy" screen, the filter is automatically applied to the policies list depending on the notification you have selected.

4. You will see the list of executed policies. You can sort the list by the type of error by clicking the  icon, or you can view all policies by clicking "Show All."

5. Select a policy from the list to view the error message.

6. For more detailed information about the problem, go to **Task History**.

7. All the information about the executed policies is displayed here. Select a task to view details.

8. The necessary troubleshooting information can be found in the "Logs" tab.

The 'Logs' tab is selected. The 'Data Protection Policy Summary' shows a 'Failed' status with the message 'Task did not complete'. It also displays 'Devices Replicated' as 0/0 and 'Devices Failed' as 0. The 'Statistics' section shows 'Replication Run Time' as 0s (File Excludes 0s), 'Replica Types' as 0, and 'Average Throughput' as 0 B/s.

9. All the logs are available here. You can toggle the output format by selecting the Source (Agent or Server) and the Level (Info, Warn, Error) of messages.

Summary Devices Alerts Logs Policy File Excludes Default Excludes Merged Recovery Point
