Upgrading Agent on CentOS, RHE and Fedora

To upgrade Linux CDP Agent to version 4.2.0, perform the following steps.

1. Execute the following command:

```
yum upgrade r1soft-cdp-enterprise-agent
```

2. Type "Y" to confirm the download.

3. The upgrade process can take some time.

A Full Block Scan will be initiated after an agent upgrade due to a restart of the agent service/daemon. This ensures replicas are consistent even after a server crash or reboot. For more information or to better understand backup types, see Benefits of CDP.

4. After the upgrade is complete, execute the following command to make sure that version 4.2.0 has been installed:

```
rpm -qa | grep r1soft
```
