Using Boot CD-ROM

Live CD is one of two (2) possible options for Bare-Metal Restore. Live CD is to be burned to a CD-ROM using a CD-writer drive and any common CD burning software. The CD must be inserted into the CD-ROM of the computer you want to restore.

This method is suitable for both Windows and Linux Bare-Metal Restores. Live CD can be used to boot into Agent or Server environments.

- Obtaining Live CD Agent — Instructions on how to obtain Live CD Agent.
- Obtaining Live CD Server — Instructions on how to obtain Live CD Server.
- Writing ISO Files CDs — Instructions on how to write ISO file to CD in Windows 7, XP, Vista and Linux Gnome, KDE.
- Booting Server From CD — Instructions on how to boot the server you want to restore from CD.
