Scheduling Control Panel Replication

To schedule a replication of Control Panel accounts, you need to create a Policy. Policies will replicate data from the Devices assigned to the selected Disk Safe. You can schedule recurring Policies or create one-time Policies. The Policy starts at the time you have specified in the Policy properties or you can run it manually. The Policy properties include information about how many Recovery Points to keep in the Disk Safe (so called "retention policy/rules").

The following frequencies may be defined for Policies:

- On Demand
- Minutely
- Hourly
- Daily
- Weekly
- Monthly
- Yearly

For instructions on adding a new Policy, see Creating Policies.

To replicate the Hosting Control Panel installed on the Agent, you need to add a Control Panel Instance to the Policy. Control Panel Instance is an occurrence of Hosting Control Panel with its unique Type, Name, and Description. See Adding Control Panel Instances.
