Linux Agent CLI - Setting Port

R1Soft allows to set the TCP port that the agent will listen on. Default value is 1167.

Follow the instructions below to set the port that the agent listens on.

1. Run the #r1sof-setup command using the --agent-port option.
For example,

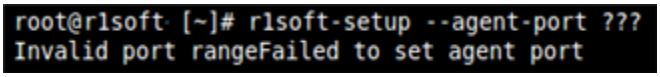
```
# r1soft-setup --agent-port 8280
```

2. If the port was successfully set, it returns the confirmation:

```
Agent port set
```

3. If the port was not set, it returns the following warning:

```
Invalid port rangeFailed to set agent port
```



See also Configuring CDP Server Ports.

For more information about the #r1sof-setup tool and its options see r1soft-setup.
