Linux Agent CLI - Testing Connection

Sometimes if unknown problems occur they may be caused by faults of connection. R1Sort allows to test the connection of your Agent with the --test-connection option of the #r1soft-setup tool.

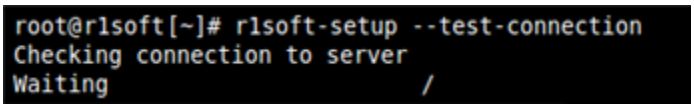
Follow the instructions below to test the connection.

1. Run the following command:

```
# r1soft-setup --test-connection
```

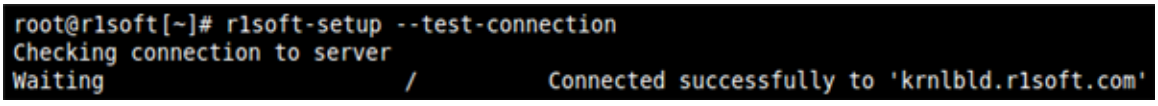
2. Wait for a while.

```
Checking connection to server
Waiting                 /
```



3. If the connection is successful, you'll receive the following answer:

```
Connected successfully to 'krnlbld.r1soft.com'
```



For more information about the #r1soft-setup tool and its options see r1soft-setup.
