Utilizing LSB Exit Codes by CDP Server and Agent Init Scripts

Product Improvement

`cdp-server` and `cdp-agent init` scripts now return Linux Standard Base (LSB)-compliant exit status codes.

For STATUS requests, the following exit codes are supported:

```
0 program is running or service is OK
1 program is dead and /var/run pid file exists
3 program is not running
```

For START requests, these additional codes are supported:

```
5 program is not installed
6 program is not configured
```
