Data Center Console - Solved Issue with Volume Status Display Error

Symptom

When the DCC Server is processing updates from a CDP Server, Volume statistics change to an "unknown" status until the update is complete.

Cause

This display inconsistency is caused by updates from the CDP Server clearing the DCC cache and then processing these updates, resulting in an unknown Volume status, quota, on disk size, and deltas, until the update is complete.

Resolution

This issue has been corrected in DCC version 4.0.0.
