MySQL Test Connection Fails when the Instance is Started with skip-innodb

Symptom

When `skip-innodb` is used in `my.cnf`, the "Test Connection" button fails in the database restore wizard.

It fails with this error:

Failed to connect to database

Failed to test database connection
Your InnoDB data files and log files reside on two different file systems. This is an unsupported configuration: /ib_logfile0, /ib_logfile1, /var/lib/mysql

Removing the `skip-innodb` line from `my.cnf` allows the test to complete successfully.

Resolution

The issue has been corrected in CDP 4.0.0.
