Solved Issue with Web Interface Becoming Unresponsive

Symptom

If the last message in the Logs is "Task History Clean up," the CDP web interface becomes unresponsive (unavailable) and no tasks are run.

Steps:
1. Log in to the CDP Server web interface.
2. Click the "Task History" item in the Main Menu.
3. Run "Clean Task History."

Resolution

The issue has been corrected in CDP 4.2.0. Running the "Task History Clean up" task no longer exhausts the number of connections.
