

# Solved Issue with Web Interface Becoming Unresponsive

## Symptom

---

If the last message in the Logs is "Task History Clean up," the CDP web interface becomes unresponsive (unavailable) and no tasks are run.

### Steps:

1. Log in to the CDP Server web interface.
2. Click the "Task History" item in the Main Menu.
3. Run "Clean Task History."

## Resolution

---

The issue has been corrected in CDP 4.2.0. Running the "Task History Clean up" task no longer exhausts the number of connections.
