API - Solved Issue with createPolicy

Symptom

After using the `createPolicy` API method, a user cannot retrieve any policies.

Using the `Policy2 getPolicies()` API method results in the following error:

```
suds.WebFault: Server raised fault: 'Fault occurred while processing.'
```

Going to the web interface results in a 500 internal error.

Cause

The problem occurs if a user tries to create a Policy with missing parameters, for example, `-Enabled`.

Resolution

The issue has been corrected in CDP 4.2.0. The system now verifies if all required parameters are specified by users when they use API methods.
