5.0 Licensing API Example - enableLicense

This is an example of an RPC call code snippet for enabling a pool/specific license.

```
#### For enabling the pool/specific license
#### Make RPC Call Start ####
 $xmlrpc_msg = new xmlrpcmsg('licensing.enableLicense', array(
  new xmlrpcval($licPool, 'string')
 ));
 $reply = $client->send($xmlrpc_msg);
#### Make RPC Call End ####
```

Response Example

Here is an example of a response to the XML-RPC request:

```
Array (
[Enabled] => 1
[License Pool ID] => 345345345-d986-4ec5-be53-345345345345
[Product] => Enterprise Edition (Linux)
[Type] => Pooled License
[Installed] =>
[ID] => 34534534-7e99-4793-be36-34534534534
[Physical Servers] => 1 )
```
