

# Multipath devices causing 100% disk space usage.

Multipath devices causing 100% disk space usage.

## Symptom

---

Disk space usage reaches 100% with multipath devices.

## Cause

---

The error occurs when multipath takes control of the snapshot and is not releasing it back to the agent to manipulate and close as needed.

## Resolution

---

Blacklisting the snapshot devices in the mutipath configuration file (multipath.conf) and restarting the mutipath daemon. The following code can be added to the configuration file.

```
blacklist {  
  devnode "^(hpc|cdp)[0-9]*"  
  wwid *  
}
```
