CDP 3.0 - Advanced Edition

Continuous Data Protection® 3.0 - Advanced Edition

All the features found in CDP 3.0 - Standard Edition

Advanced Edition - Additional Features*

- CDP for MySQL
- Hosting Control Panel Integration
- Windows NTFS DACLs and SACLs Restore
  3.0 Advanced Edition will restore Discretionary (access rules) and System (Audit Rules) Access Control Lists during file restore
- Advanced Archiving Rules
  CDP Server 2.0 requires separate backup schedules to be configured for archiving. And archiving on different schedules (for example hourly & weekly) requires multiple synchronizations.
  Those days are history. Define one Data Protection Policy that optionally contains: Minutely, Hourly, Daily, Weekly, Monthly Archiving Rules.

Every archive rule creates a new recovery-point (based on most recent synchronization). Archiving never requires additional synchronizations and Archiving takes place instantly - there are never any delays or queuing to create an archive.
