

# CDP 3.0 Enterprise Edition

## Continuous Data Protection® 3.0 - Enterprise Edition

All the features found in [CDP 3.0 - Standard Edition](#) and [Continuous Data Protection® 3.0 Advanced Edition](#)

### Enterprise Edition Additional Features\*

- **Centralized CDP Backups for Many Agents**  
Manage all of your agents with one CDP Server web interface. CDP Server is installed separately from Windows and Linux agents.
- **Multi-user System**  
Manage users. Designate permissions for browsing, backup, restore
- **Disk Quotas and SLA**  
Manage user disk quotas using Volumes and define CDP Service Level Agreements
- **Bare-Metal Restore**  
3.0 Single Server is file restore only. With 3.0 Enterprise we add our all new bare-metal restore process for 3.0 Restore using Linux Live CDs, Windows Bootable CDs, PXE Network Boot, and R1Soft Live Boot Remote Restore
- **FULL API**  
Many customers have asked for a complete, unlimited nothing hidden API. With 3.0 we are exposing the same API our own user interface uses! It may be more than you asked for. Either way you have got it. All operations available to the Web GUI are available in the API! With 3.0 the API was very important and is used to automate our own unit testing to ensure a new level of correct operation with every release of 3.0
